APPLICATION DEVELOPER

We have an excellent opportunity with an immediate opening for a software engineer with 2 – 5 years' experience in VB.Net/C#/Java web applications, APIs using WCF and Web API and front-end development. You will have a number of duties and will have a role in driving the future of Rural Mutual's applications. You'll work independently and in small teams with a group of creative, motivated, intelligent, organized and hard-working individuals. We are looking for someone who is technically proficient, with social skills to contribute as a member of a cross-functional team and the discipline to work independently. If you don't know an answer, you know where to find it or aren't afraid to ask. The ideal candidate is looking for a long-term career opportunity.

Required Qualifications:

** Visual Studio 2015/2017 proficiency
** Understanding of relational databases including Oracle and Sql Server
** Understanding of Object Oriented design
** Experience writing technical or business documentation
** Unit Testing experience
** Ability to work independently and in a team setting
** Proven track record of excellence
** Bachelor's degree in a related field or equivalent professional license

Technical Requirements:

** Experienced in VB.Net/C#/Java application development
** Experienced in Asp.Net Web Forms and MVC web application development
** WCF and Web API services development
** Ability to read, create and modify existing JavaScript client side code
** Angular experience
** jQuery experience
** An understanding of and experience with HTML5, CSS3
** PL/SQL, MS SQL

Desired Skills:

** UX/UI Experience
** Sql Server Reporting Services
** TFS including source control, build, test and deployment automation
** Cross-Platform Mobile Development
** Experience in the property & casualty insurance industry
